## Goins Crane Service

### Sculpture Installation

This project in Abilene, Texas brought together the precision of heavy lifting with the creativity of public art. Our LTM 1300 crane supported the installation of a solid granite book sculpture, designed by a local artist and commissioned for a college campus.

Handling a piece of this scale and significance required careful planning, controlled movements, and close coordination between our operators, rigging crew, and project partners. Every phase of the lift was executed deliberately, ensuring the sculpture was placed exactly as intended while protecting both the artwork and the surrounding environment. The result is a lasting installation that reflects the power of collaboration, craftsmanship, and disciplined teamwork.
