McIntrie 5165

Glass Panel Setting

This project in Grand Prairie, Texas required a high level of precision and coordination, as our team utilized the Grove GMK 5165 to set new glass panels on the roof. Working at height with delicate materials demands more than the right equipment—it requires careful planning, clear communication, and an experienced crew executing each lift with accuracy and control.

While the scope appeared straightforward on paper, the work called for steady hands and disciplined teamwork to safely maneuver within tight spaces. Through a focus on efficiency, safety, and attention to detail, the installation was completed seamlessly, reflecting the expertise and professionalism our team brings to every project.
